How to install?

1.) To install the plugin, you simply need to move the folder VST3 into the folder "Common Files" to install the plugin. Windows will ask you for Admi rights, to be copy to this location, press the "Admin"-Button to continue. Alternatively, if you use an individual location for Plugins, you can open the folder VST3 and copy the plugin to your VST3 folder.

2.) To install the presets, move the folder "D1rtyDuck" to "Documents". Don't move it to a different location, otherwise the plugin won't find the presets.

3.) Open your DAW and enjoy making music with Nomonyx.

4.) Go to your local parc and feed the ducks.
